
Post not working

Posted by ocsdesign - 2009/04/04 03:57

I just installed Rapid Forum, everything looks like it is working except when you try to post nothing happens!! Help!

That's terrible! We can't have that. Please post a link here or email it to joomlasimple@gmail.com

I'm having the same problem!

Posted by prilly - 2009/04/23 16:10

I have Rapid Forum installed and configured, but it says error on page on the bottom browser bar, when I try to post anything. On the form itself, there's no indication of why nothing is happening.

I'm sure it's something simple.

Do we need to have write permissions on one of the folders or something?

Cyndy

I'd like to know how to fix this myself, if it's a common problem.

Thanks!

Cyndy

Hi Cyndy! Sorry for the delay. PLease email super admin access to joomlasimple (at) gmail.com. We haven't seen this problem before, but we'd be happy to take a look.

Also having problem with post. It's a long delay and if I wait I got a reply for each click!
Have you found a solution to this?
I am using Firefox when I'm tesing.
